Deep ultraviolet light generates  
**PHOTOPLASMA**

**Destroys 99% of known bacteria and viruses**

**Prevents the growth of mould, slime, mildew and yeast**

**Proven to kill Corona-virus in 1s**

**Removes unpleasant odors**

PHOTOPLASMA is the core of the **SanitChill** sanitisation technology . The system converts oxygen and water molecules to highly reactive oxygen species air. The ionised air breaks the bonds of organic compounds (bacteria, viruses, dust particles, etc) efficiently.

The bacteria-free air blows throughout the refrigerator acrossing the evaporator and storage compartment which actively minimises cross contamination and ensures it is in the most hygienic condition.

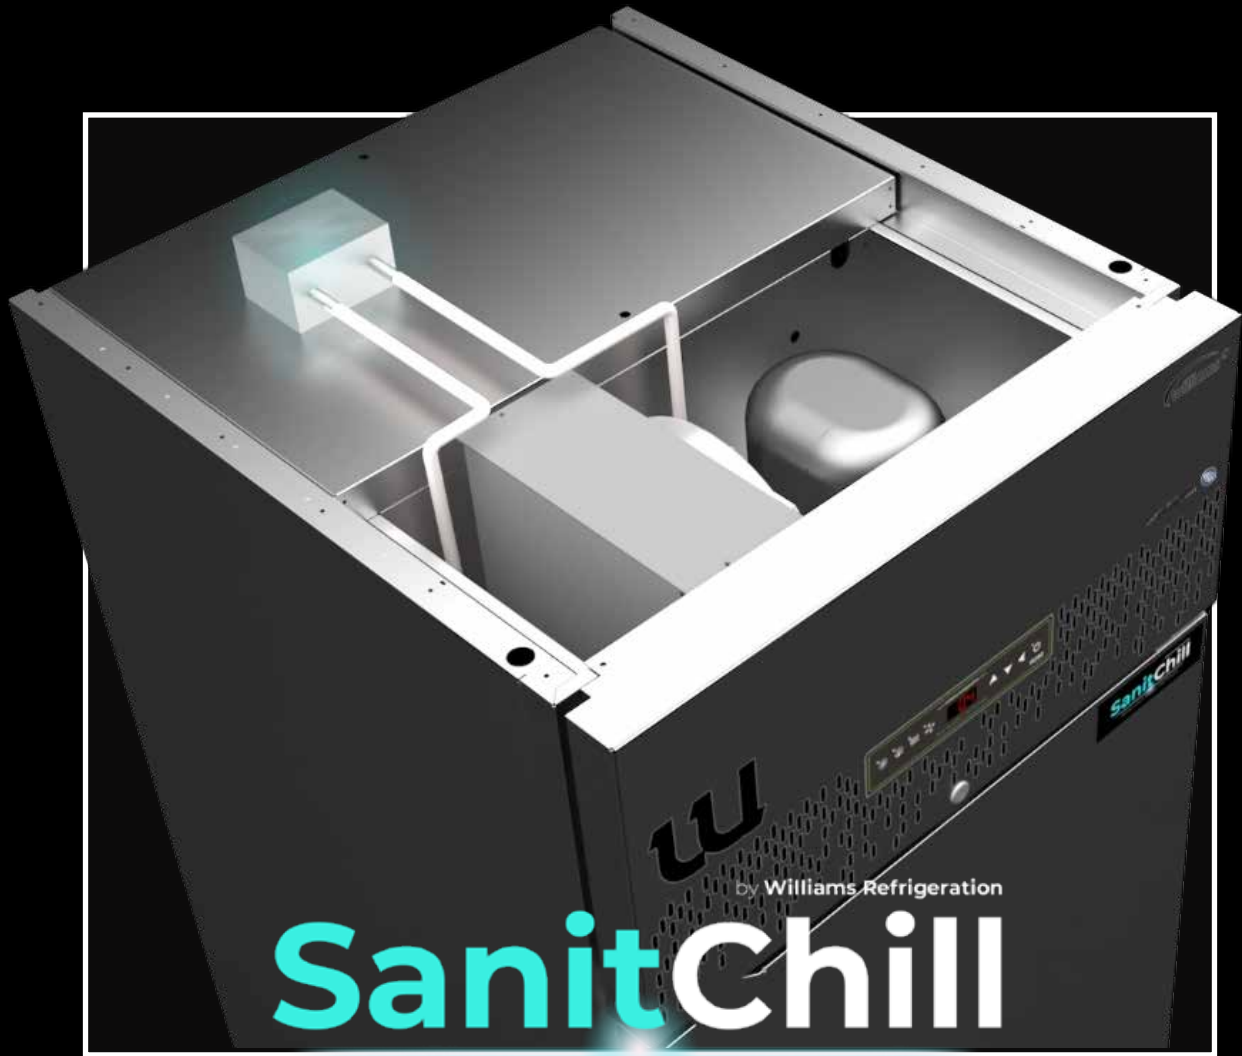

Refrigeration plays a critical role in keeping food safe. **SanitChill** by Williams Refrigeration would be the ideal choice of technology for maintaining food safety in a refrigerator.

## Williams Refrigeration

- Garnet | Overnight Thaw
- Opal | Emerald | Bakery | Aztra | Aztra Salad | Under Broiler
- Mobile Banqueting
- Roll in Ruby
- Blast Chiller
- Upright Display
- FOH Counter

Note:  
The device is not available for the products with operating temperature below 0° or table top opening
